Element6's client is looking for a software developer with 4 years of experience to join their Mequon, Wisconsin's based team.

What are important things YOU need to know about this role?

Hybrid Work Flexibility - candidates must be in person at our Mequon office for training (approx. 3 months). Hybrid opportunities exist for the right candidate following all onsite training
Must have at least two years of Software Development Experience
What will YOU be doing? To author and maintain software applications of varying complexities and on varying tech stacks - in the healthcare space.

What will YOU be working on everyday?

Assist level 4 and lead engineers to develop, modify and maintain software applications for internal and external client use. Provide first level support on common operational concerns
Work collaboratively with internal resources to assess and understand technical specifications and business requirements for new systems.
Maintain current modules, applications or processes in production.
Actively participate on an Agile scrum team, sizing work efforts and decomposing functionality and iteratively delivering value.
Unit test development
Follow directives from project mentor (senior engineer, project architect, etc.).
Triage production issues and affect solutions
Code spelunking
Perform software design and coding according to our organization and accepted secure coding patterns
Work collaboratively with internal team members on investigating and fixing defects
Act as the first level of operational triage support as necessary.
What YOU need to be a Good Candidate:

Required Level of Education
Bachelor's degree in Computer Science or other related field or equivalent years of experience or equivalent certification
Required Level of Experience
Typically 2 to 4 years of experience in software development.
Required Knowledge, Skills, and Abilities such as but not limited to:
